

# CHEVRON PACKING SEALS (V-SEAL SET)

MAKE  
**PARAKH**

CHEVRON SETS are manufactured as a set ring and fabric-reinforced energizer. CHEVRON SETS (composed of three elements) are applied in double-acting cylinders and CHEVRON SETS (composed of five / seven elements) are used in Rod applications where harsh working conditions are present.

CHEVRON SETS can be regulated in the number of elements (Height) when fluid pressure varies as found in hydraulic presses and pumps. For high pressure, special applications, or the presence of a particular chemical agent, the standard NBR/FABRIC can be substituted with VITON/FABRIC material.

## GENERAL FEATURES

- ✓ Ease of mounting
- ✓ High abrasion resistance
- ✓ High extrusion resistance
- ✓ Low deformation value

## WORKING CONDITIONS

- ✓ Pressure: = 400/600 bar
- ✓ Speed: = 0,5 m/s
- ✓ Temp. NBR/FABRIC: -30°C + 120°C
- ✓ Temp. VITON/FABRIC: -15°C + 200°C
